## 1. Study Information

|                          |                                                                                                          |
|--------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Name of the study</b> | Safety and efficacy of EXV-802 and EXV-801 in the treatment of agitation in Alzheimer's disease dementia |
| <b>Study sponsor</b>     | Exciva GmbH                                                                                              |
| <b>Disease</b>           | Agitation in Alzheimer's disease                                                                         |
| <b>Phase</b>             | Phase III                                                                                                |

## 2. Information about the drug that will be tested in the study

|                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name of drugs</b>                                                     | <p>EXV-802 (also called deraphan) + EXV-801 (also called deramciclane)</p> <p>EXV-802 is a fixed-dose combination of the approved drug dextromethorphan and the experimental drug EXV-801.</p>                                                                                                                                                                                                                                                                                                                                                       |
| <b>Administration</b>                                                    | Oral administration (capsules twice a day)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Is the drugs already on the market for another medical condition?</b> | No, however dextromethorphan, one of the components of EXV-802, is a cough suppressant used in many cough and cold medicines. Additionally, the combination medicine dextromethorphan and bupropion is approved to treat agitation linked to Alzheimer's disease dementia in US.                                                                                                                                                                                                                                                                     |
| <b>Will all participants receive the same drug?</b>                      | <p>Participants will be selected by chance to receive one of the following options:</p> <ul style="list-style-type: none"><li>• An oral administration of EXV-802</li><li>• An oral administration of EXV-801</li><li>• An oral administration of placebo (also called a dummy treatment which is an inactive substance identical in appearance to the drug being tested with no active therapeutic effect).</li></ul> <p>Neither the participant nor their doctor will know if the person is receiving the investigational drug or the placebo.</p> |

## 3. Information about participating in the trial

|                                                     |                                                                                                                                                                                                                  |
|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>What are the researchers trying to find out?</b> | <ul style="list-style-type: none"><li>• The purpose of this study is to evaluate the efficacy and safety of EXV-802 and EXV-801 in treatment of agitation in people with Alzheimer's disease dementia.</li></ul> |
|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                           |                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How long will the treatment last?</b>  | <ul style="list-style-type: none"> <li>• 6 weeks</li> </ul>                                                                                                                                                                                                                                                  |
| <b>What your involvement will entail?</b> | <ul style="list-style-type: none"> <li>• During the study, participants will be asked to complete tests that will assess their agitation and aggression (e.g., CMAI, CGI-S, NPI-C).</li> </ul> <p>Further information on the procedures, tests and number of visits can be obtained from the study team.</p> |

| <b>4. Who can participate in this study?</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Who can participate in the study?</b>     | <p>To take part in the study, participants must:</p> <ul style="list-style-type: none"> <li>• Be between 55 and 90 years old</li> <li>• Have a confirmed diagnosis of Alzheimer's disease dementia</li> <li>• Have a clinically significant, moderate/severe agitation</li> <li>• Have a diagnosis of agitation, according to the International Psychogeriatric Association (IPA) provisional definition of agitation</li> <li>• Have a study partner who has a sufficient contact with the participant (at least on four individual days for at least two hours per day), is willing to participate in study procedures throughout the study duration.</li> </ul> |
| <b>Who cannot participate in the study?</b>  | <p>Exclusion criteria include:</p> <ul style="list-style-type: none"> <li>• Confirmed primary diagnosis of another form of dementia other than Alzheimer's disease dementia</li> <li>• Agitation symptoms that are primarily attributable to a condition other than Alzheimer's disease dementia</li> <li>• History of uncontrolled seizures or a history of epilepsy</li> </ul>                                                                                                                                                                                                                                                                                   |

|  |                                                                                                                                                                                                                                                 |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <ul style="list-style-type: none"> <li>• Major medical illness or unstable medical condition.</li> </ul> <p>The above list is not exhaustive. It includes the most common conditions and diseases that might exclude people from the study.</p> |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5. Where and when will the study be conducted?

|                                          |                                                                                                                                                                      |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| European countries involved in the trial | <ul style="list-style-type: none"> <li>• Czechia</li> <li>• Germany</li> <li>• Italy</li> <li>• Poland</li> <li>• Slovakia</li> <li>• Spain</li> <li>• UK</li> </ul> |
| Estimated start date of recruitment      | April 2026                                                                                                                                                           |

## 6. Information for your doctor

|                               |                                                                                                                                                                                                                                                            |              |                   |
